

Self-Aligning Ball Bearings

Self-aligning ball bearing features two raceways in the inner ring and a common spherical raceway in outer ring.

The bearing is consequently self-aligning and resistant to angular misalignment of the shaft relative to the housing.

It's designed for applications where considerable shaft misalignment occurs by incorrect manufacturing or mounting process.

Self-aligning ball bearings mainly accommodate radial load, and can also carry a small amount of axial load, but can't support to pure axial load.

d: 10 ~ 60 mm
